                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Scoring table:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Perfect score:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           OM nucleic - nucleic search, using sw model
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           on:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

This CDS clone is a part of a collection of human full-length expression clones generated by Harvard Institute of Proteomics.
This ORF clone has been cloned without stop-codon (to allow fusion with C-terminal tag). The CDS has been directionally cloned using BD In-Fusion(TM) cloning system between the SalI and HindIII sites of the pDNR-Dual vector. Additional sweences in the clone: 'ACC' after SalI site and before 'ATG' to provide Kozak consensus sequence; 'GG' after last codon and before HindIII site to maintain reading frame. Each clone is clonally isolated and full-length
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Direct Submission

A human bone marrow cDNA library was screened with probes comprising nuclectides 82-840 and 840-1270 of murine NR4 cDNA, and a composite sequence for human NR4 was produced from isolated clones. The availability of genetic sequences for NR4 permits the development of a range of agents capable of modulating the activity of IL-13 and related cytokines such as interleukin-4 for the treatment of allergy, asthma and other conditions relating to 19E. The genetic sequences can also be used in prodn. of recombinant NR4 or fusion proteins including NR4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 1383 BP; 421 A; 292 C; 319 G; 351 T; 0 U;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes a new composition comprising an antisense CC oligonuclectide (ON) with low adenosine (up to 15%), which targets nucleic acids involved in bronchoconstriction, allergies, and/or continuation. The ON can have antiinflammatory, antiallergic, and/or cc antiasthmatic, cytostatic and analyses associated with inflammation, if compositions are useful for the treatment of diseases associated with inflammation, if cinding lung disease and diseases whose secondary ce fiects afflict the lungs of a subject. They can be used for treating ce impeded respiration, pulmonary vasoconstriction, allergies, distance, impeded respiration, pulmonary vasoconstriction, allergies, distance, cinpeded respiration, pulmonary vasoconstriction, pain, cystic fibrosis, pulmonary hypertension, emphysema, chronic obstructive pulmonary disease (COPD), and cancers such as leukaemias, lymphomas, carcinomas, and cancers which may metastasise to the lungs, including breast and prostate cancer. The reduction of the adenosine content of the content of the content of the reluces side effects. The A-containing ONs break down with the content of the activates adenosine receptors causing control construction and inflammation. AAA32313 to AAA33312 represent the nucleotide sequences given in the sequence listing from the present invention, which correspond to SEQ ID NO:11 to 2815, and then the last 185 equences given in the disclosure of the present invention do not match cup with their corresponding SEQ ID NO: sequences given in the sequences given in the sequences of the present invention do not match cup with their corresponding SEQ ID NO: sequences given in the sequences given in the sequences given in the sequences given in the sequences of the present invention do not match cup with their corresponding SEQ ID NO: sequences given in the seque

The invention relates to a novel pharmaceutical composition, which has first active agent comprising an oligonucleotide antisense to the initiation codon, coding region, 5 or 3 end genomic flanking regions, 5 and 3 intron-exon junctions, or regions within 2-10 nucleotides of junctions of genes encoding a polypeptide associated with lung and/or nasal airway dysfunction and a second active agent comprising an antiinflammatory steroid and ubiquinone. A composition of the invention has antiinflammatory, antiallergic, antiasthmatic, hypotensive, immunosuppressive, and cytostatic activity. The composition may have a use in antisense gene therapy. The composition is useful for treating c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; antisense; lung dysfunction; nasal airway dysfunction; antiinflammatory steroid; ubiquinone; antiinflammatory; antiallergic; antiinflammatory; antione; immunosuppressive; cytostatic; gene therapy antisense gene therapy; respiratory; lung; adenosine sensitivity; adenosine receptor; bronchodilation; bronchoconstriction; lung allergy;

CC analgesic, hypotensive, immunosuppressive and cytostatic activity, is a CC beta-adrenergic agonist. The composition is useful for preventing or treating a respiratory, lung or malignant disease. The administered CC composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to CC reduce the amount of target polypeptide present in the lungs. The CC pulmonary obstruction, and/or bronchoconstriction and/or lung CC inflammation, allergies and/or surfactant hypoproduction are associated CC with a disease or condition such as pulmonary vasoconstriction, cC inflammation, allergies, asthma, impeded respiration, respiratory CC distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary transplantation rejection, pulmonary infections, bronchitis or cancer. CC The reduced adenosine content of the anti-sense oligos corresponding to Cthymidines present in the target RNA serves to prevent the breakdown of CC thymidines present in the target RNA serves to prevent the breakdown of CC thymidines present in the target RNA serves to prevent the breakdown of CC prevent any unwanted effects due to it
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention also describes a kit, that comprises: (a) a delivery device, in separate containers, (b) the oligonucleotides, (c) instructions for adding a carrier and for use of the kit. The compo of the invention has antiallergic, antiinflammatory, antiasthmatic,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               comprising oligonucleotides, effective for alleviating bronchoconstriction, respiratory tract inflammation, allergies a reducing adenosine sensitivity, levels of adenosine (A) or (A) is surfactant depletion or hyposecretion, when administered to a majority of the surfactant of a surfactant control or hyposecretion, when administered to a majority of the surfactant depletion or hyposecretion, when administered to a majority of the surface of the surface
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Pharmaceutical composition for treating asthma, has antisense oligonucleotide containing less percentage of adenosine, targeted nucleic acids associated with lung airway or lung dysfunction, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 expression of a target polypeptide associated with lung airway or lung dysfunction or cancer and can be anti-sense to the corresponding mRNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim

In vitro detection of systemic inflammatory conditions, for e.g. monitoring progression, expression of disease-related genes. response syndrome and related, comprises detecting abnormal

Disclosure; Page; 75pp; German.

The invention relates to a novel method for in vitro detection of CC systemic inflammatory response syndrome (SIRS). The method comprises CC detecting abnormal expression of disease-related genes, or their CC associated peptides. The method of the invention demonstrates and the interpretation immunosuppressive and antiinflammatory applications and CC may be used for early differential diagnosis, monitoring progression, CC assessing risk, assessing the likely response to treatment and for post CC mortem diagnosis of systemic inflammatory response syndrome, sepsis and CC sequences of the invention, or derived proteins or peptides, may be useful as calibrants in assays for the specified diseases, for evaluating CC useful as calibrants in assays for the specified diseases, for evaluating activity or toxicity in screening for active agents and/or for CC preparation of agents for treatment or prevention of the specified CC diseases. The current sequence is that of a human SIRS/sepsis diagnostic CC marker DNA fragment of the invention. Note: The sequence data for this CC patent did not form part of the printed specification, but was obtained CC in electronic format directly from WIPO at the will be published CC disclosed within the specification, however, these have not been taken into the proposition of the sequence of a proposition and the proposition of the sequence of a proposition of a proposition of the sequence of a proposition of into account during indexing due to inconsistencies in application

                                                                   В
                                                                                                                                                                                                Ś
                                                                                                                                                                                                                                                                                                                                                                  This sequence encodes human interleukin-13 (IL-13) alpha receptor. The invention relates to new purified peptides comprising 380 or 427 amino acid sequences, which are receptors for interleukin-13 (IL-13); the 380 and 427 aa proteins are designated IL-13R beta and alpha respectively. The IL-13R beta has high affinity for IL-13R while IL-13R alpha has low affinity, but acquires high affinity when associated with the IL-4 receptor. Nucleic acids encoding IL-13R beta and alpha are used as idagnostic probes to identify aberrant synthesis or genetic anomalies of heterozygosity and rearrangements, or chromosomal anomalies. They are also used for production of recombinant IL-13R beta and alpha which can be used as IL-13 antagonists, specifically to regulate IL-13-induced responses for treatment of inflammation and callergy. Il-13 receptors are also useful as antisense molecules for gene therapy (blocking synthesis of IL-13R). Antibodies are used (in standard immunoassays) to diagnose diseases associated with abnormal expression of IL-13R receptors; when coupled to a toxin also for treatment of of standard overproduction of IL-13R. Cells that express IL-13R at the surface are used to identify ligands and modulators of IL-13R
                                                                                                                                                                                                                                             Query Match
